PRIYANK H. WADIWALA

DEVOPS ENGINEER | JAVA BACKEND, AUTOMATION & RELEASE

Vadodara, Gujarat | +91 96623 76086 | priyank.wadi7@gmail.com | linkedin.com/in/priyank-wadiwala | github.com/13priyaank

SUMMARY

Software engineer with nearly 3 years of experience shipping and supporting production applications across Python, Java, and Node.js stacks, with a focus on automation, containerised deployment, database migration management, and fast root-cause analysis of defects. Built metadata-driven automation that cut project delivery time from ~10 days to 2 days, and currently supports a healthcare platform (FastAPI, PostgreSQL, Next.js) with versioned migrations, Git-based review workflows, and log-driven troubleshooting. Built and containerised a Java / Spring Boot service with Docker Compose and automated JUnit/Mockito test coverage. Looks to apply this automation-first mindset to CI/CD, Kubernetes, and AWS in a regulated banking environment.

SKILLS

Automation & Deployment: Docker, Docker Compose, Nginx, Git & GitHub (branching, pull requests, code review), release coordination, workflow automation, configuration management

Java Stack: Core Java, OOP, collections, concurrency (CompletableFuture), Spring Boot, Spring Data JPA, REST controllers, Maven, JUnit, Mockito

Databases: PostgreSQL, SQL, Redis, MongoDB, Alembic versioned migrations, SQLAlchemy ORM, Spring Data JPA

Troubleshooting & Support: Log tracing, defect reproduction, root cause analysis, IT support fundamentals (troubleshooting, networking, system administration, security)

Languages & Scripting: Java, Python, JavaScript, TypeScript, C++, GoLang

Backend & APIs: REST API design, Spring Boot, FastAPI, Node.js, Express.js, Next.js API routes, gRPC, service-based architecture

Tools: Postman, Maven, JUnit, Mockito, npm, VS Code

WORK EXPERIENCE

Full-Stack Engineer — OnePrism Innovations LLP, Vadodara *Jul 2026 – Present | Full-time, On-site*

MedChaaya — healthcare document management platform (FastAPI, PostgreSQL, Next.js)

- Manage database change control for a multi-role healthcare platform using Alembic versioned migrations and SQLAlchemy, keeping schema changes traceable and repeatable across environments.
- Perform root cause analysis on defects spanning frontend, backend, and data layers by tracing application logs, reproducing issues, and shipping reliable fixes.
- Work in a Git/GitHub branching workflow with peer code review, coordinating changes with product and frontend team members through development and release.
- Design and maintain REST APIs with request/response validation and role-based access control for a platform handling sensitive medical records.
- Integrate LLM/RAG workflows with strict validation of AI-generated output before it reaches application logic, protecting downstream system reliability.

Junior Software Developer — AxeForce Technologies (SmartWalk.io), Anand *Apr 2024 – Jun 2026*

SmartWalk — web-based virtual walkthrough platform

- Designed metadata-driven automation workflows that reduced project delivery time from ~10 days to 2 days (an 80% reduction), removing repetitive manual steps from the release pipeline.
- Diagnosed and resolved integration, application-state, and event-handling defects raised by QA and clients, working directly with stakeholders to clarify and close issues.
- Managed configuration and third-party API integrations in Node.js and Next.js API routes, with input validation and structured JSON processing.
- Used Git and GitHub feature branches, code review, and release coordination across the team; refactored duplicated workflow code to improve maintainability.

PROJECTS

BidPitch — Real-Time Ad Auction Service

Java, Spring Boot, Spring Data JPA, PostgreSQL, Redis, Maven, Docker

- Packaged the service and its dependencies (PostgreSQL, Redis) with Docker Compose for consistent, reproducible local environments.
- Built a Spring Boot auction service with concurrent bid fan-out (CompletableFuture), per-bidder timeouts, and a fixed response deadline; modelled data with Spring Data JPA and cached campaign budgets in Redis.
- Covered settlement, budget enforcement, and timeout behaviour with JUnit and Mockito tests.

AI Knowledge Assistant

FastAPI, LangChain, LangGraph, RAG, LLM APIs

- Built a document Q&A service with REST endpoints for upload, retrieval, and grounded response generation, with validation of model output before returning it to callers.

EDUCATION

Master of Computer Applications (MCA) — SVIT, Vasad *2024 – 2026 | CPI: 8.54*

Bachelor of Computer Applications (BCA) — CHARUSAT *2021 – 2024 | CGPA: 9.18*
